

System configuration

lifting table for a manual unpalettiser

label station

Solution

The new packing line was constructed with two autarkic, fully automated packing bands and an automatic Kuka-palletisation.

The automatization realized by Aberle allows optimal efficiency at dispatching to the two packing lines. Order specifically the control center staff has the opportunity to adjust functions and control mode flexibly. Furthermore for both packing bands manual depalettling and palettling was planned as an emergency strategy.

Advantages for the customers

The complete solution from Aberle today allows Stihl a substantially higher job processing per day. Thus the constantly growing sales figures at Stihl are covered. The former requirements of personnel leasing at the packing bands could be reduced by Aberles' sophisticated automation concept.
